

LABORATORY TESTS

We have had our trap tested in an independent European laboratory, specialized in insect studies. In this case, this laboratory does not issue certification, but has verified the effectiveness of the protection and detection of our trap.

RESULTS

	EXPECTED	NOTICED *
①	The bugs must be able to climb up to the rough outer surface to reach the gutter	✓
②	If they have passed between the foot and the gutter, they must be able to enter the trap through the holes	✓
③	None should be able to climb on the cover	✓
④	Once in the gutter, they must fall into the reservoir	✓

CONCLUSION

	EXPECTED	NOTICED *
BARRIER EFFECT : by insulating the bed base, the bedding remains sound		✓
DETECTION EFFECT : examining the transparent reservoir helps detect infestations		✓

* Subject to correct installation of traps and following our instructions for use.
